**ABOUT US**

# ABOUT US

Pomona is a young, versatile and innovative freeze-drying company that is located in Turkey.

We aim to offer our geography's rich agricultural products in the form of purely natural, highly nutritious and perfectly beautiful and delicious to our customers.

We retain the product's original nutrition, shape and flavour without using any preservatives or added sugar in our state-of-the-art facility via employing a unique and innovative technology which is called freeze-drying. Freeze-drying is known as the most advanced drying technology in the world.

All of our supply and production processes are run by high level control and food safety mechanisms. We select top quality raw materials from our contracted farmers, then process, dry and pack them within our facility. Beside the effects of the products on human health, we precisely manage the all impacts of each processes on environment too. Our name, Pomona, is inspired by a Roman goddess who guards the orchards. We are eager to actualize the mythological character of Pomona in real life.

We create and develop tailor-made solutions for our customers through our dynamic and innovative structure. We feed our institutional memory with customer experiences and R&D studies in order to provide customer-specific solutions within a short time.

# OUR VALUES

## QUALITY

To perfect our products' quality, we continuously improve each steps of supply, production, customer services, policies, and procedures. Products and processes are being analysed systematically, then outputs are integrated to the procedures to institutionalize. This, leads us to a point where we build a sustainable quality improving structure.

## CUSTOMER-CENTRIC

Our one of the most essential value in the short and long term will be a positive customer experience at every stage of the customer journey. We do know, anticipating customers' needs, sharing, capturing the insights, and building reliable relationships are the key practices that bring us to the right direction. That is why we take each step with the awareness of customer-centric approach.

## ECO-CONSCIOUS

The most valuable source for us is nature as our products are consisting of simply natural plants. We are highly aware of saving the earth because we aim to produce and provide the most natural products to our customers in the future again. Due to our existing responsibility, we endeavor to reduce the harmful impacts on nature while we produce and use each source.

# OUR FACILITY

Our newly established facility is located in Istanbul, Turkey. The strategic location allows us to supply and deliver products fast anywhere in the world, as we are next to global transportation ports in Istanbul (land, air, and sea).

We implement industry best practices and world-class food production procedures on our shop floor to ensure product safety and the most sanitary production environment. Our production system is managed by state-of-the-art computer systems and freeze-drying parameters during the process are recorded in each dryer 24 hours a day. Freeze-dried products are packed in temperature and humidity-controlled packing rooms to avoid contamination or spoilage due to excess exposure to moisture. Recorded data during each freeze-dry process and lot number assignment from raw material acceptance to finished product delivery provide an easy and quick traceability on our shop floor. An accurate data gathering and traceability in each step enable us to reach an optimum product quality and make customer orders ready for the shipment in extremely good circumstances

# FREEZE-DRYING

# TECHNOLOGY

## SELECTING

We harvest top quality raw materials at the peak of their ripeness and nutritional perfection from our contracted farmers and trusted suppliers.

## FREEZE-DRYING

Ice molecules, inside of the frozen raw materials, turn directly into a water vapour from its solid form without a melting phase and foods get slowly and gently dried over several hours under low temperatures which results in the protection of the cell structure and nutritional values of original products.

## QUICK FREEZING

We harvest top quality raw materials at the peak of their ripeness and nutritional perfection from our contracted farmers and trusted suppliers.

## PACKAGING

Freeze-dried products are put in moisture resistant packs in our humidity and temperature-controlled room to avoid from spoilage due to excess exposure to moisture.

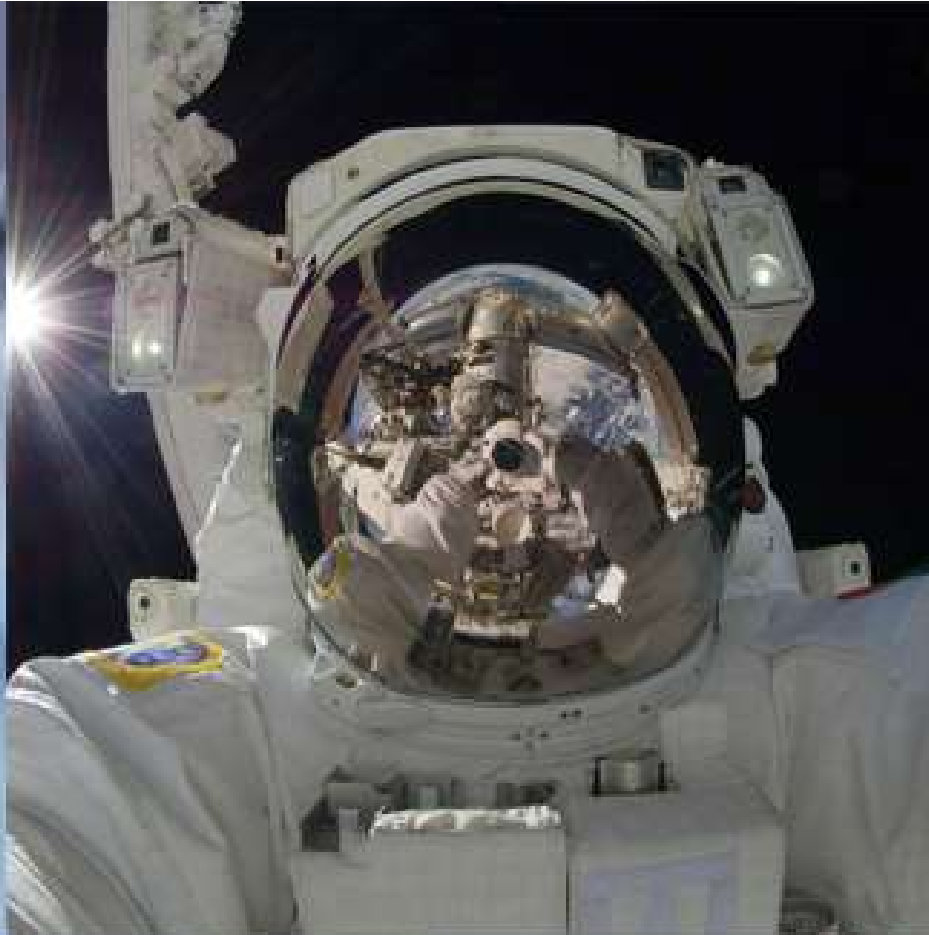

# WHAT IS FREEZE-DRYING?

We produce in our state-of-the-art facility via employing a unique and innovative technology which is called freeze-drying. Fundamental principles in freeze-drying comes from the sublimation process. Sublimation is a phase transition process from a solid to a gas without ever entering an intermediate liquid phase.

In our freeze dryers, moisture is removed from the product up to 99% under low vacuum and low temperature. Vacuum environment that is created by our freeze dryers to lower the air pressure in their chambers and initiates the phase change of water from ice crystals to gaseous without melting which has a significant impact to prevent the mushy and shrivelled appearance in finished products. That is why freeze-dried products still looks like a fresh product, instead of a mushy shape.

Since vacuum makes sublimation possible under low temperature, freeze-dried products preserve its shape, aroma, flavour, colour, vitamin retention and nutrient content. Thus, freeze-drying is known as the best drying technique for heat-sensitive foods.

# HISTORY

Freeze-drying is also known as lyophilisation which was invented in 1906. In the early stages, it was implemented to preserve blood serum due to its ability to preserve heat-sensitive biological materials.

In the mid-1900s, besides the pharmaceutical industry, it was started to be used for food. Freeze-dried food became a major meal for astronauts and military rations.

Currently, freeze-dried food is used for instant coffee, cereals, granolas, instant soups, ready-to-eat meals, natural food flavouring and colouring, backpacking meals, pet food, and standalone snacks.

# ADVANTAGES OF FREEZE-DRYING

## NO ADDITIVES

Freeze-dried foods do not need to contain additives for preservation as their water activity level is around 0,2 where bacteria never grow.

## EXCELLENT NUTRITION

Freeze-dried product, often considered the closest to fresh product, retains most of its nutrition.

## SAME AS FRESH FORM

The process also preserves the actual colour and shape of the original raw material, reassuring consumers they are getting real fruits and vegetables in their diets.

## LONG SHELF LIFE

Freeze-dried foods can last up to 20 years in the proper packaging and storage condition due to their low moisture (3%) content without any additives or preservatives.

## REHYDRATABLE

Unchanged cell structure make them ready to take on water again. Freeze-dried products may rehydrate in a couple minutes and they can be used as a ready-to-eat meals.

## CONVENIENT

Freeze-drying removes about 97% of a food's water content and so the weight of that food is reduced by as much as 90%. Light freeze-dried foods are very handy and convenient for traveling and long-haul endurance events.

## CRUNCHY TEXTURE

As they have crispier texture, they are strong alternative to unhealthy crunchy snacks. Moreover, this texture increases the fruit and vegetable consumption for kids.

# WHAT IS CONVENTIONAL DRYING?

Conventional, also known as air drying process is a method that the hot air (almost 70 °C) is used to evaporate water out of the product that needs to be dried.

## CONVENTIONAL DRYING

**Requires** a fair amount of preservatives to keep them fresh.

**Lose nutritional content** due to the use of heat in the processes.

The heating process **destroys** flavor, shape and colour.

Higher moisture content extends shelf life up to **2 years**.

Tends to be **chewy and hard** on the outside because it still retains much of its water content.

## FREEZE-DRYING

**No need to add in additives** to preserve the food due to very low moisture ratio.

Retains **97%** of its original nutrition.

Low heating and freezing process **preserves flavor, shape and colour**.

Very low moisture content extends shelf life up to **20 years**.

**Crunchier** texture.

# SERVICES

# OUR SERVICES

We produce high-quality freeze-dried foods in terms of nutrition, aroma, and visuality.

We offer to create flexible and innovative solutions for our customers and various industries.

Our plant is fully equipped with new machines and designed to cover;

Flexible Order Size,

---

Contract Manufacturing,

---

Private Labelling,

---

Trial Production.

---

And Tailor-Made Solutions.

# WHO WE SERVE

We are proud to provide the goodness of freeze-dried fruits and vegetables to national retailers, foodservice operators and ingredient companies.

RETAIL

FOOD SERVICE

INGREDIENTS

# SAVE FOOD SAVE PLANET

- One third of the food produced in the world for human consumption every year approximately **1.3 billion tonnes** gets lost or wasted.
  - Per capita fruits and vegetable waste by consumers is about **120 kg** in a year.
  - **45%** of all fruits and vegetable produced are wasted.
- Freeze-dried foods help to reduce food wastage. As they can:
- be stored **long time** in a room without spoilage.
  - not be judged by its appearance. Freeze dried foods are **not** «ugly».
  - be **eaten** with their skin. Freeze dried fruits skin should not be peeled.

# APPLICATION AREAS

Freeze-dried foods have wider application areas. They are used for cereals, granolas, instant soups, ready to eat meals, natural food flavouring and colouring, backpacking meals, and standalone snacks
